Introduction

The banner portlet allows you to create a rotating slideshow of images to display on a page. You can determine how big the images appear on the page, how quickly the images rotate and more.

Who Should Use this Guide

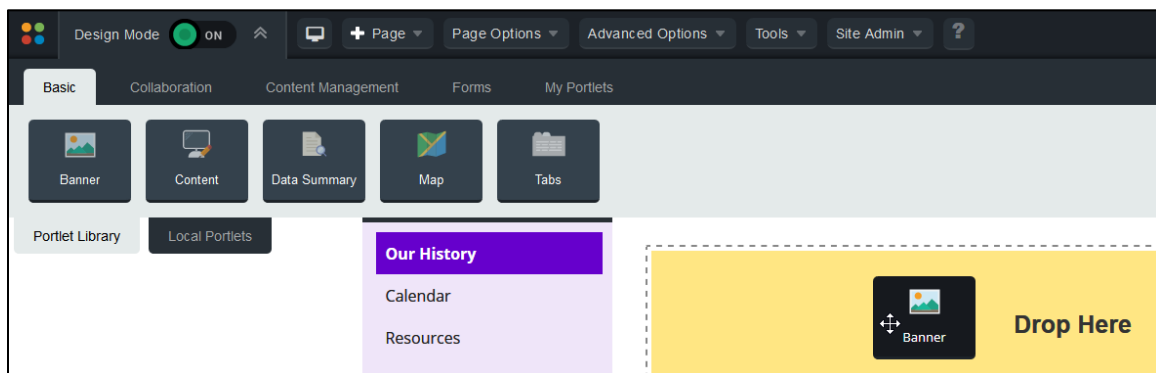

This guide is written to be accessible to users of all technical backgrounds.

Adding a Banner Portlet

The process for adding a banner portlet to a page is the same process as for adding any other portlet to a page.

Set **Design Mode** to **On**.

Find the region where you wish to display your banner. In the Portlet Library, click on the **Basic** category. Drag and drop the **Banner** portlet on to the page.

Editing a Banner Portlet

To configure a Banner portlet, set **Design Mode** to **On**. Click the  icon on the top-right corner of the **Banner** portlet.

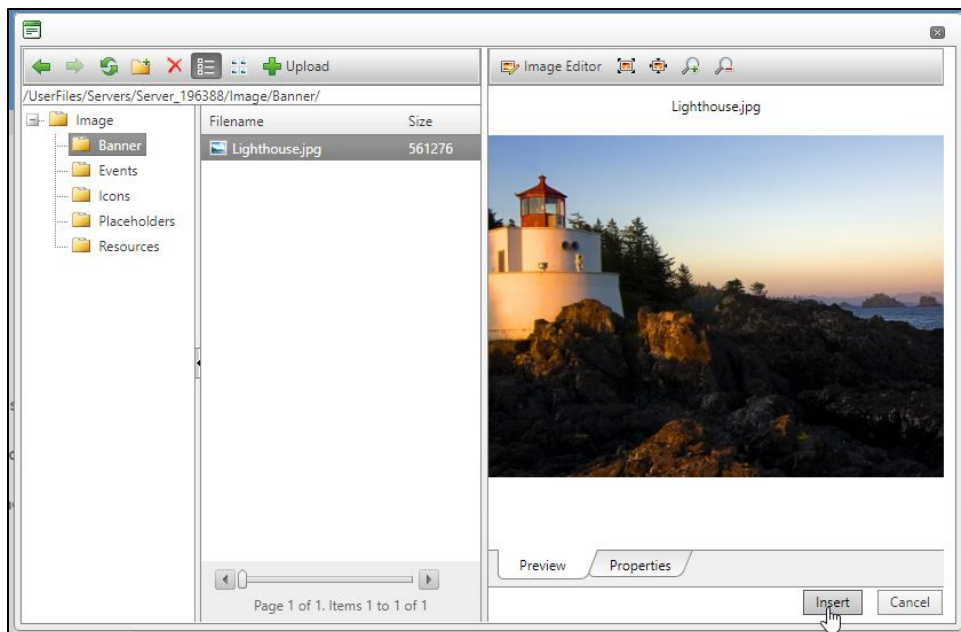

Adding Images

To add images, click **Add Image**.

To select an image for the banner, click **Browse**.

In the window that pops up, navigate to the image you wish use and click **Insert**.

Fill out the **Name** of the image. You can also include a **Summary** if you wish.

If want users to be able to click on the image and be directed to a webpage, you can enter a web address in the **URL** field.

You will also need to fill in **Alt Text** that screen readers use to identify the image.

IMAGE DETAILS	
Location	<input type="text" value="/UserFiles/Servers/Server_196388/"/> browse Image Editor *
Name	<input type="text" value="Landscape"/> *
Summary	<input type="text"/>
URL	<input type="text" value="http://"/>
Alt Text	<input type="text" value="A landscape photo of a lighthouse"/> *
<input type="button" value="Insert Image"/> <input type="button" value="Cancel"/>	

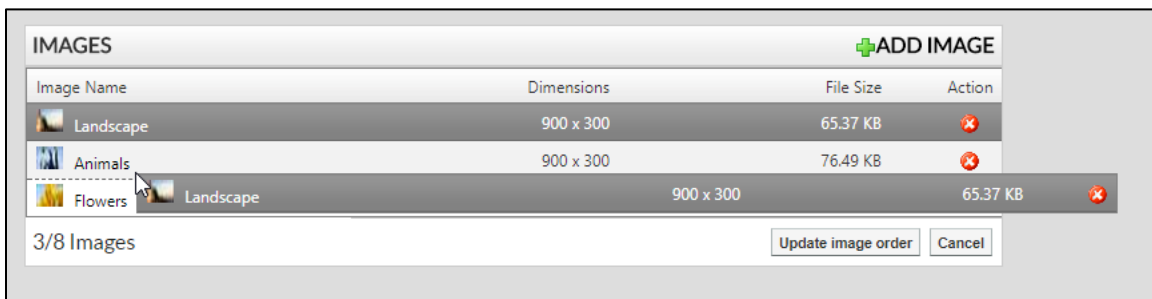

Click **Insert Image** to add the image.

You can keep using the **Add Image** link to add as many images to the banner as you wish to use.

 **Note:** To make for an optimal viewing experience, we recommend not having more than 8 images in your banner portlet. We also recommend using images that are under 100KB. Given the size of the banner portlet area, there is little benefit to using larger files and having larger files can make the page slower to load, particularly for users that may have a slower internet connection.

Rearranging Images

If you wish to change the order your images are displayed, click on the line for an image (but not on the thumbnail, the name of the image or the  icon) and drag the image to the preferred location in the order. The dotted line will show you the new destination for your image.

To save your new order, click **Update Image Order**.

Updating Images

If you wish to make changes to the properties for an image, click on the **Image Name**.

You can then use **browse** to select a different image or you can make changes to the **Name**, **Summary**, **URL**, or **Alt Text** fields.

EDIT IMAGE

Update Image Cancel

To save any changes, click **Update Image**.

Deleting Images

If you wish to remove an image, click the  icon.

Portlet Settings

The **Settings** tab of the Banner Portlet allows you to control how the images are displayed and what action, if any, should be taken when clicking on an image.

The **Starting Image** field determines which image is displayed when the page first loads. You can either display the **First image** or **Randomly select an image**.

If **Slideshow Mode** is set to **On** then the images will automatically rotate every **X** seconds (the **Speed** field determines how many seconds there will be between each rotation).

You can also choose whether or not to **Show controls** on the banner. In order to help ensure your banner is accessible, you should leave this option set to **Yes**.

The **Maximum Height** and **Maximum Width** fields determine the largest size that the images will be when added to the page. If the image is larger than this, it will be resized to meet the higher of the two numbers.

 **Note:** *If the image is resized, it will still need to fit within the maximum height and width numbers. This means that part of the image may be cropped or the image height may vary between images. So, for instance, if you have an image that is 1600 pixels wide by 1200 pixels tall and you add it to a banner portlet that has a maximum width of 900 and a maximum height of 300, that image will be resized to a 900 wide by 675 high image. However because the maximum height of the banner is 300, only the top 300 pixels of the banner will show, the remaining 375 pixels will be cropped out.*

To simplify matters, we recommend editing your images to match the dimensions used by the portlet prior to uploading the images to your site.

The **Animation** drop-down allows you to choose the animation used when the slideshow transitions from one image to another.

The **Action on image click** option allows you to determine what happens if you click on an image in the banner. You can choose the following options:

- **No Action:** Nothing happens when a user clicks on the image.
- **Advance to Next Image:** The slideshow will switch to the next image.
- **Open URL in Current Window:** If you have set a URL on the banner image, then clicking the image will open the URL in the current tab. If no URL has been set on the particular image, clicking on the image will do nothing.
- **Open URL in New Window:** If you have set a URL on the banner image, then clicking the image will open the URL in a new tab. If no URL has been set on the particular image, clicking on the image will do nothing.
