Introduction

The Site Map portlet allows you to display a list all pages on your site. The number of pages displayed will depend on the depth and content settings of the portlet.

Who Should Use this Guide

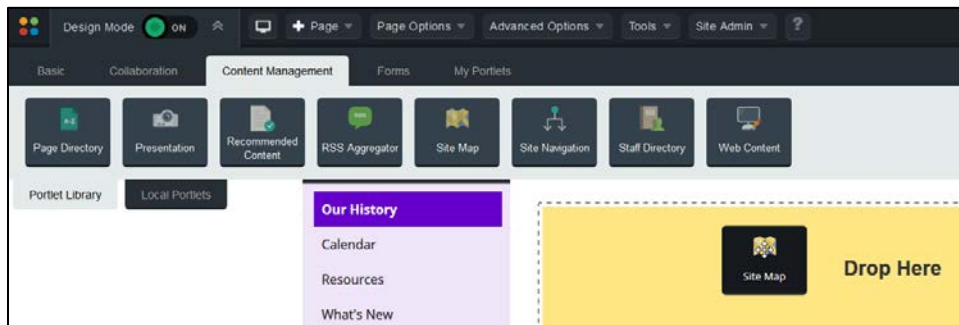

This guide is written to be accessible to users of all technical backgrounds.

Adding a Site Map Portlet

The process for adding a Site Map portlet to a page is the same process as for adding any other portlet to a page.

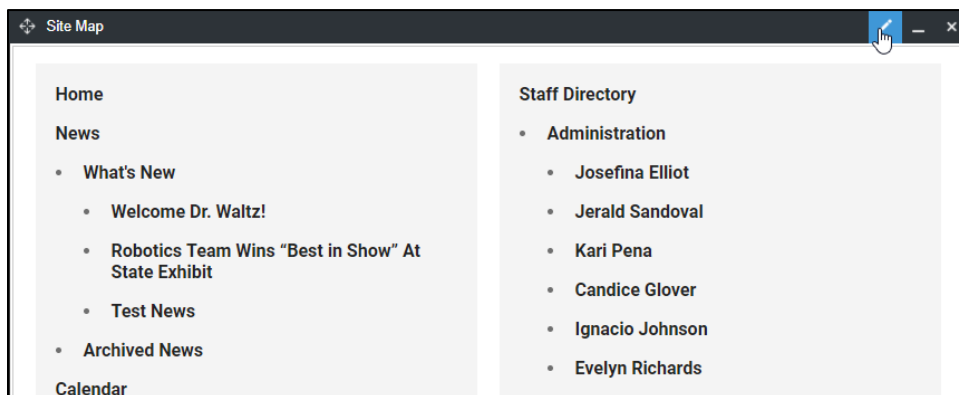

Set **Design Mode** to **On**.

Find the region where you wish to display your Site Map. In the Portlet Library, click on the **Content Management** category. Drag and drop the **Site Map** portlet on to the page.

Editing a Site Map Portlet

To configure a Site Map portlet, set **Design Mode** to **On**. Click the  icon on the top-right corner of the **Site Map** portlet.

The **Level of Depth** setting allows you to choose how many levels deep you want the site map to go. If you choose a depth of **2**, it will show all top-level pages and the sub-pages of those pages. If you choose a depth of **3** it will show all top-level pages, the sub-pages of those pages and the sub-pages of those sub-pages. The deeper the level, the more pages that are included in the Site Map.

 **Note:** You can only set the depth as deep as the deepest page on your site.

The **Page Option** allows you to choose whether to **Only display pages that the user has permission to view** or to **Display all visible pages**.

SETTINGS	
Level Of Depth	3 ▾
Page Option	<input checked="" type="radio"/> Only display pages that the user has permission to view
	<input type="radio"/> Display all visible pages
<input type="button" value="Submit"/> <input type="button" value="Cancel"/>	

Once you have configured your settings, click **Submit** to save.

You will now see your Site Map displayed on the page.
